

**SPECIAL
POINTS OF
INTEREST:**

- **Lightweight materials**
- **Ergonomically designed**
- **Maximum product display**

The Future of Rail Catering is on Track!

Following extensive research into lightweight, durable materials Sovereign On Line is currently developing its new innovative catering trolley range.

Combining the strength of metal with composite materials allows Sovereign On Line to achieve a catering trolley that is not only lightweight but robust.

Due to the increase in value of customer belongings, customers are now reluctant to leave their items unattended whilst travelling, therefore mobile retailing offers added value to both the customer and the operator.

Designed to ensure maximum sales area the trolley allows the products to showcase themselves, maximising revenue for the operator.

**.....to be launched in
ISSUE 2**

This lightweight solution to mobile retailing will be available with four different drink dispensing options;

- Espresso machine,
- In-cup drinks
- Mini soluble vending
- Pump pots serving filtered coffee.

Launch date: 1st June 2011

The New CA System...

.. trolley manoeuvrability has never been so simple

The ease of manoeuvrability of trolleys is integral to their design, this is why Sovereign On Line has teamed up with On Board Logistics and their "Castor Alignment System".

This unique alignment system will not only give the operator more control over the trolley but will also aid in the reduction of damage to the train interior and injury to the operator.

The CAS patented design allows trolleys to manoeuvre

into confined spaces and in straight lines with minimal effort.
